Dennis,

The UPDES General Permit Coverage No. UTG040012 was modified to include the temporary discharging outfall for the Crandall Canyon dewatering event. The permit was signed today and I have just faxed you a copy as well. Please keep me posted of the schedule for discharging as I would like to visit at least one of the days during discharge (I will tentatively plan to visit on Friday and/or Monday). Also as we discussed, please have the visual observations and any field parameters documented so that a review can be performed on site of the activities during discharge. Thanks and good luck with everything.

Jeff,

Can you give me an update on the status of my request for a Temporary Modification to the UPDES permit to allow for the discharge of the water standing in the No. 2 shaft in Crandall Canyon? The contractor has built a platform over the shaft and the pumping company expects to mobilize and install the pump on Thursday, April 19th. If the temporary modification is approved, pumping will most likely start Thursday afternoon or Friday morning. If you anticipate any problem with the permit modification approval I will need to delay the mobilization of the pumping equipment and crew. I took another water sample yesterday and hope to have the results this afternoon. I will keep you informed.

Thanks,
Dennis
